Enhance Document Control With

ADOBE LIVECYCLE® RIGHTS MANAGEMENT ES SERVER

Create your own rules with Adobe LiveCycle® Rights Management ES Server.

After all, you are in the best position to know what truly works for your company, department, or workgroup. With Canon's Integrated Solutions, you will be able to create policies that are embedded into scanned documents. These documents when opened will trigger a check to ensure the latest policies and access list on the server are enforced. The end result is increased confidentiality and flexibility — all without altering your current process.

adaptive to current infrastructure

customizable document policies

Define customized policies that work best for your company

Increase document security without compromising flexibility

Create and apply new control policies, even after document creation

Update and effect latest control policies at any time, automatically

Advanced made simple for you.

## Adobe LiveCycle® Rights Management ES Server

Administrators can set document privileges and apply security policies by creating Policy Protected PDF files created at the device or even after document creation, utilizing the Adobe LiveCycle® Rights Management ES Server.

This enables administrators to encrypt files and apply persistent and dynamic policies that help maintain confidentiality and control use. Each recipient's use of sensitive information, including when and how often a file is accessed, can also be monitored through detailed audit logs.

These policies are persistent and are part and parcel of an organization's data governance and data loss prevention strategy. Business-critical information is protected, providing greater assurance that recipients can interact with information in pre-authorized ways, helping to prevent inadvertent or malicious disclosure of sensitive or confidential information.

How it works
Once a Policy Protected PDF document is created on an imageRUNNER ADVANCE device, upon attempt by a user to open the protected PDF, the Adobe Reader will contact the Rights Management Server to check the latest authorized users, expiration, auditing and watermarking policies set by the administrator. These latest policies will then be enforced by that application to ensure the information in that document remains secure.

Full, up-to-date protection throughout the information lifecycle

This feature allows protected access to documents throughout the information lifecycle. It also permits policy-based enforcement and dynamic policy control of documents that have been created in the past. This feature can also ensure that only the latest documents are used or in circulation. Lastly, system administrators have the ability to revoke access to documents by former employees, former business partners, or contractors to protect critical information.

Requirements to note:
To be able to generate a PDF linked with Adobe LiveCycle® Rights Management ES, the Adobe LiveCycle® Rights Management ES must be licensed and pre-configured by a system administrator and the imageRUNNER ADVANCE device must be connected via the intranet or internet. The following PDF file formats are not compatible with Adobe LiveCycle® Rights Management ES: PDF/A-1b and Encrypted PDF.

Creation
Distribution
DOCUMENTS CONTROL POLICIES
Disposition
Usage
Maintenance

The Document Lifecycle safeguarded by Document Control Policies

To integrate these solutions into your imageRUNNER ADVANCE device, simply speak with your friendly Canon representative.
