

## LOG IN TO SIMPLICITY

**Universal Login Manager** is designed for small to medium enterprises, providing your users a simple, personalized way to log into a device. It also enables the IT department to track print and copy usage without requiring costly servers.

### SERVERLESS DESIGN

The Universal Login Manager allows direct user authentication on the device or via an Active Directory Server. In serverless mode, administrators can create user accounts and set access permissions using the web server on the device. Access information can be shared across devices within the network.

### MULTIPLE LOGIN MODES

Users can authenticate at the device by selecting their photo or by entering their username and password. If ID card login is preferred, the optional MiCard PLUS card reader is compatible with 45 different proximity technologies and can read any two card types simultaneously.

## FLEXIBLE ACCESS CONTROL

Many organizations want to be able to restrict certain device features from specific users or groups. The Universal Login Manager, together with Access Management System kit allows the administrator to restrict functionality such as, color copying or emails at each individual device.

## SIMPLE TRACKING REPORT

Universal Login Manager provides a simple tracking report via a Rich Internet App to give administrators a simple overview of usage per user or department. Data from multiple devices is shown in a single consolidated report, and can be exported as a .CSV file for further analysis.

## UPGRADEABLE TO uniFLOW

Universal Login Manager caters to small and medium enterprises whose needs are dynamic and evolve over time. It can be easily upgraded to a full uniFLOW platform for a holistic, unified solution that provides mobile printing, workflow optimization, fully automated reporting, and advanced security.

The Universal Login Manager is a simple, cost-effective solution to secure your business documents. For more information, please contact your friendly Canon sales representative today.
